DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to *a system for providing position information of a target mobile communication terminal whose position is to be found*, classified in class 455, subclass 456.1.
 - II. Claims 29-30, drawn to *a method for providing position information of a mobile communication terminal when determined that said communication terminal will be powered off*, classified in class 455, subclass 412.2.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as monitoring the location of a target mobile communication terminal, and therefore providing the location of the target communication terminal to the monitoring terminal without determining a upcoming power-off state of the target communication device. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
